

MAGNETIC CLOSURE KIT

INSTALLATION GUIDE

The Magnetic Closure Kit provides a way to hold the safety gate securely in a closed position using a permanent magnet disk attached to the gate.

All parts of the Magnetic Closure Kit have been designed and tested for outdoor use and exposure.

The permanent magnet is rubber coated and the screw is 316 stainless steel. It will hold the Intrepid double bar gate closed up to a wind force of 11 bft.

How to install

Tighten the screw until there is approx. 5 mm of space left between the magnet and the safety bar. The rubber washer is provided to secure the magnetic disk, but still allows the disk to 'wobble'. This way, the magnetic disk is able to make optimal contact with the metal guardrail post.

ITEM	QTY	DESCRIPTION
1	1x	Rubber washer
2	1x	Rubber coated magnet disk
3	1x	Screw, stainless steel 316
